

IN THE SPECIFICATION

Please amend the Abstract as follows:

~~The present invention relates to an An information processing apparatus and method, a recording medium, and a program for removing jitter and reducing the delay of the information processing system. A substantial error indicated by ΔT is produced between accumulated value $\Sigma(Rx(i+1) - Rx(i))$ of Rx-intervals of reception time Rx of the packets shown in the upper portion of FIG. 3 and accumulated value $\Sigma(Tx(i+1) - Tx(i))$ of time stamps Tx of these packets. For each number of TS-transport stream packets on which this substantial error ΔT provides one clock, a time equivalent to one clock is added to the subsequent time stamps Tx of the TS-transport stream packets or this time is subtracted therefrom to adjust time stamp Tx, thereby correcting the deviation in time from reception time Rx of the TS-transport stream packets. The present invention is especially applicable to stream data sender/receiver devices.~~
